Coffee shop sales, first half of 2026

What sold, where, and how it was paid for

Sample analyst · Generated 1 July 2026

> Tables, statistics and charts in this report were computed from the data after the steps listed with each one. Text marked **Analyst's note** is a person's interpretation, not a computed result. Patterns shown here are observations; they do not show that one thing causes another.

This report was made in QiUD from invented sample data. The orders were cleaned first: test rows, a total line and exact duplicates were removed, missing values were filled, and the payment names were made consistent.

Hover over a chart for its numbers, and click a legend entry to hide a series.

Contents

1. Orders at a glance
2. Datasets
3. Orders by store and payment method
4. Units sold per month, by store
5. Units sold: store by product
6. How orders were paid for
7. Which products account for the units
8. Average customer rating by store
9. Histogram: customer_age
10. Box plot: unit_price by product
11. Work log

Orders at a glance

Which stores and products carry the volume.

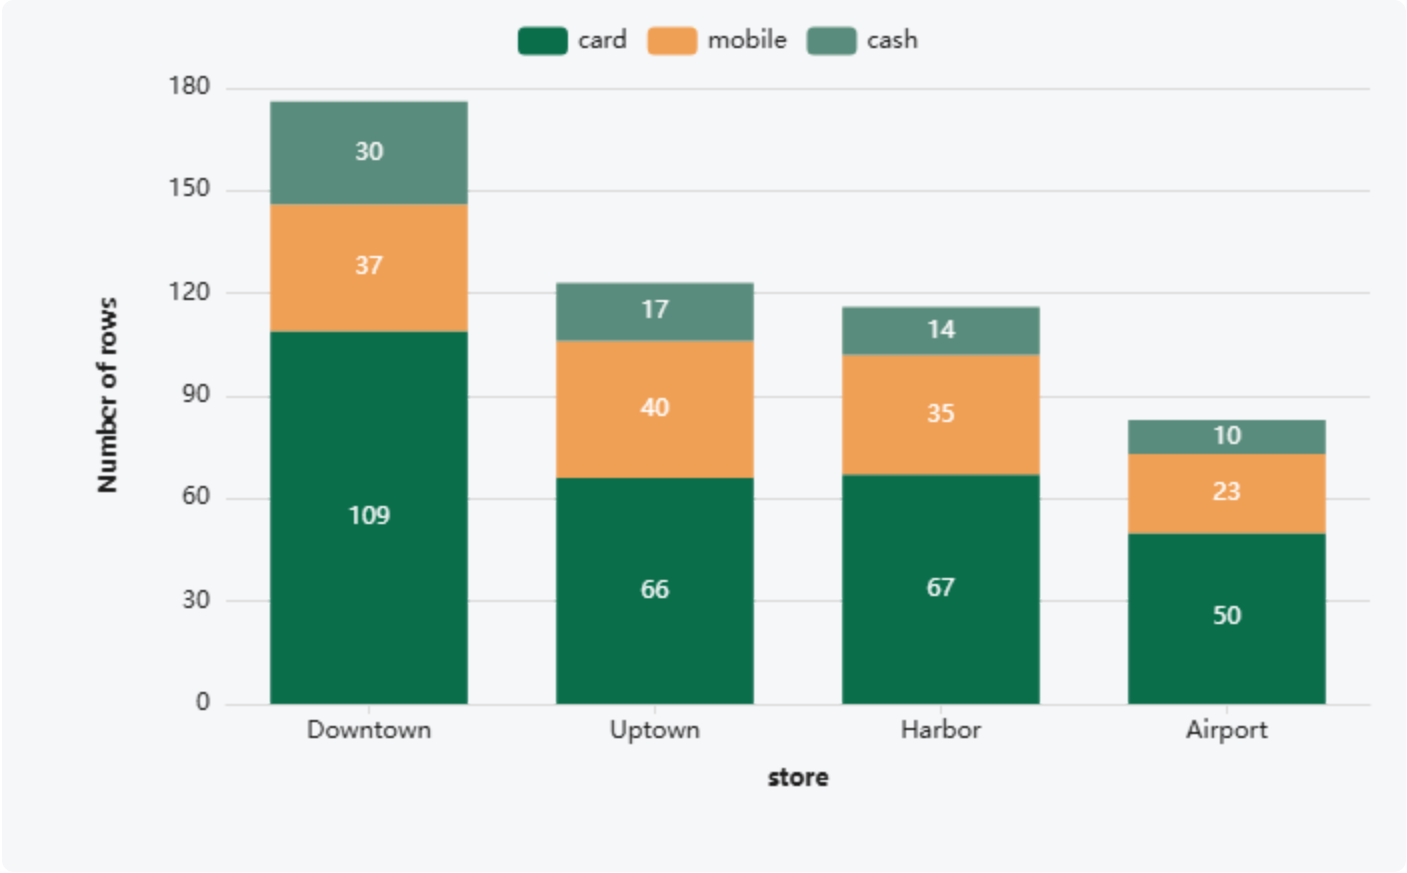

Datasets

File	Rows × columns	Notes
coffee-shop-sales.csv	529 × 13	

Rows and columns are those of the file as imported.

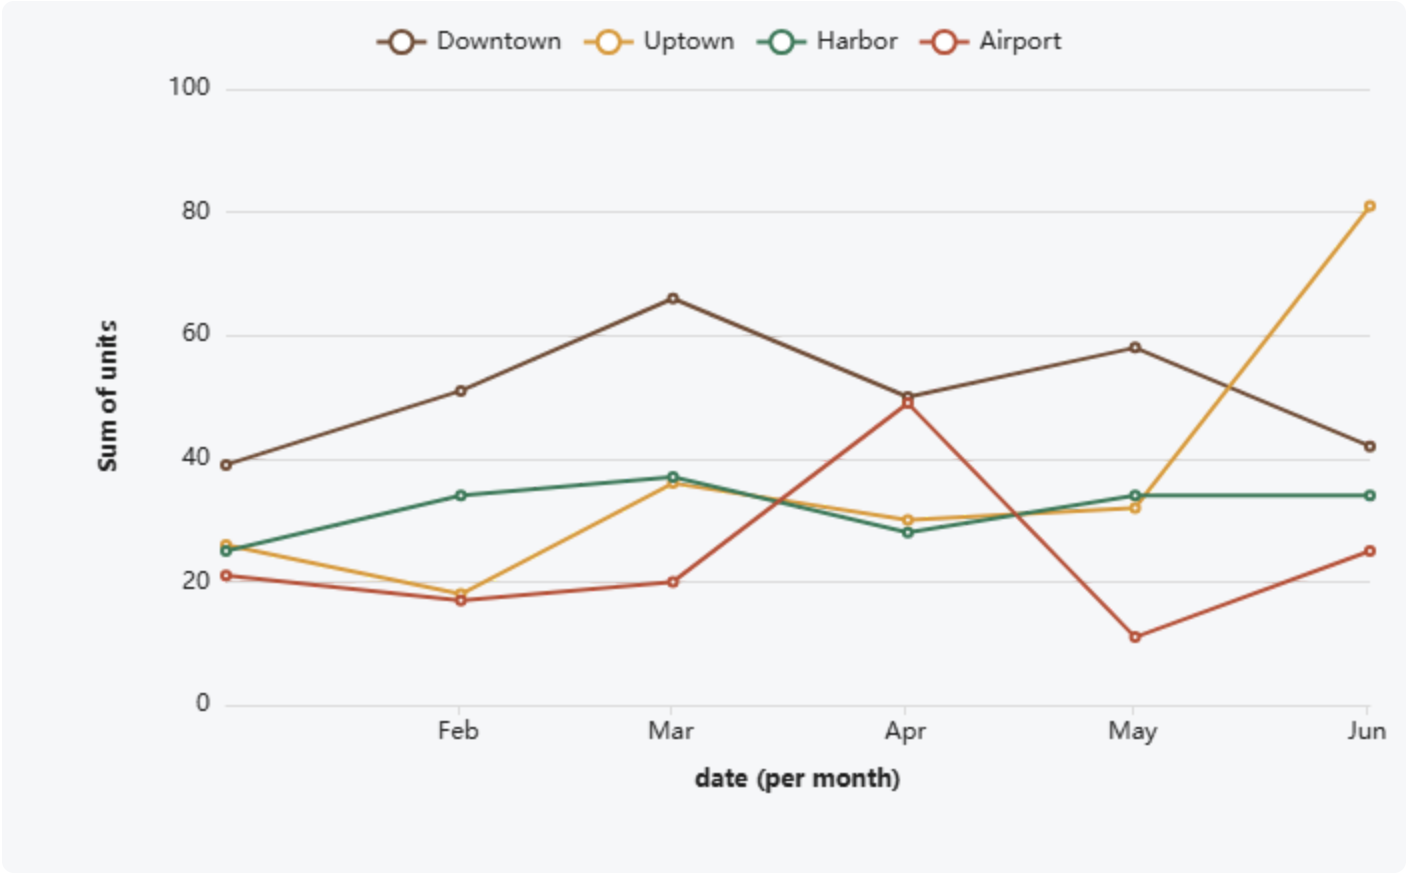

Orders by store and payment method

Each bar is a store; the colours show how its orders were paid for.

▶ How this was made

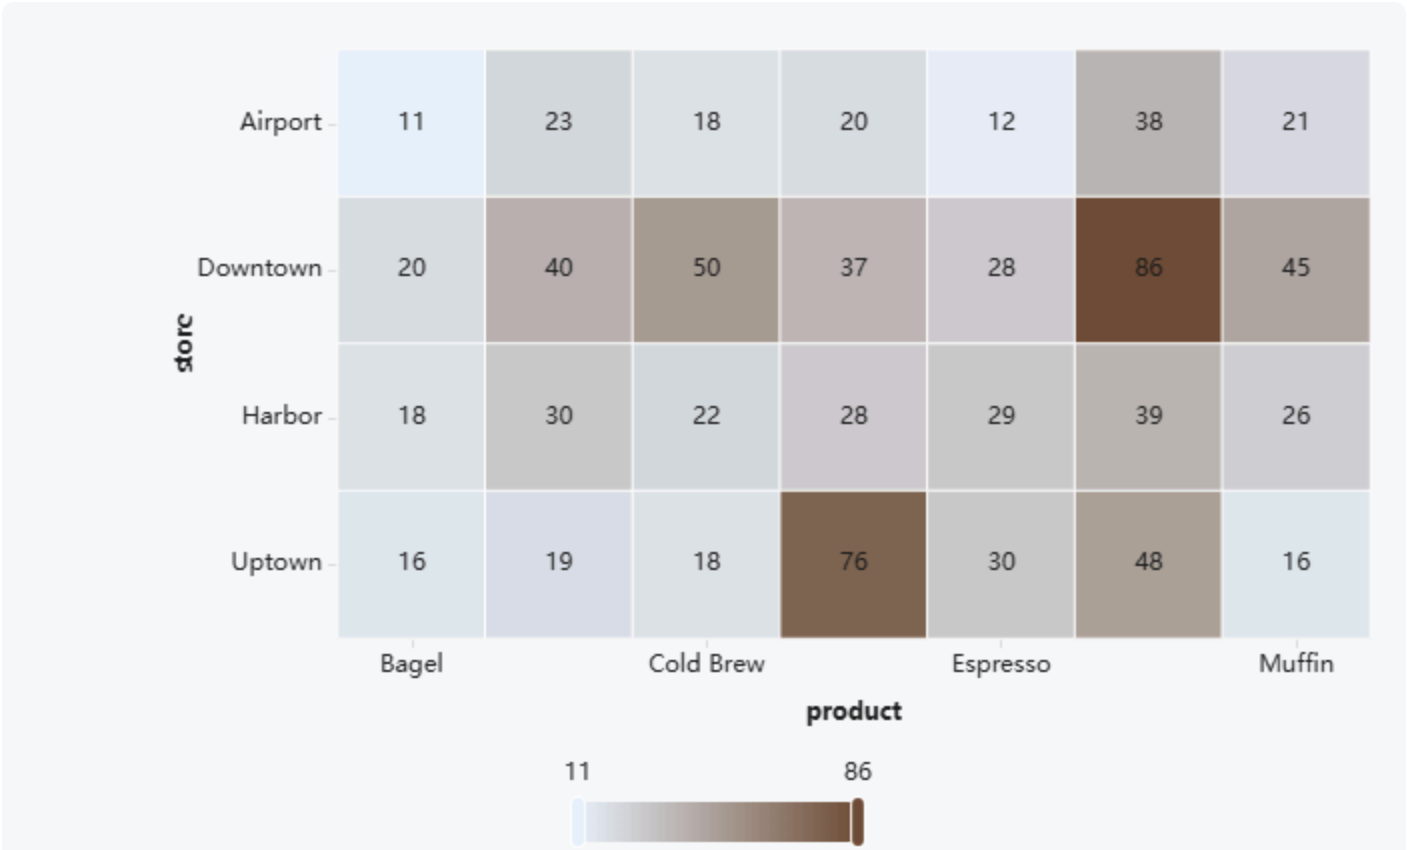

Units sold per month, by store

▶ How this was made

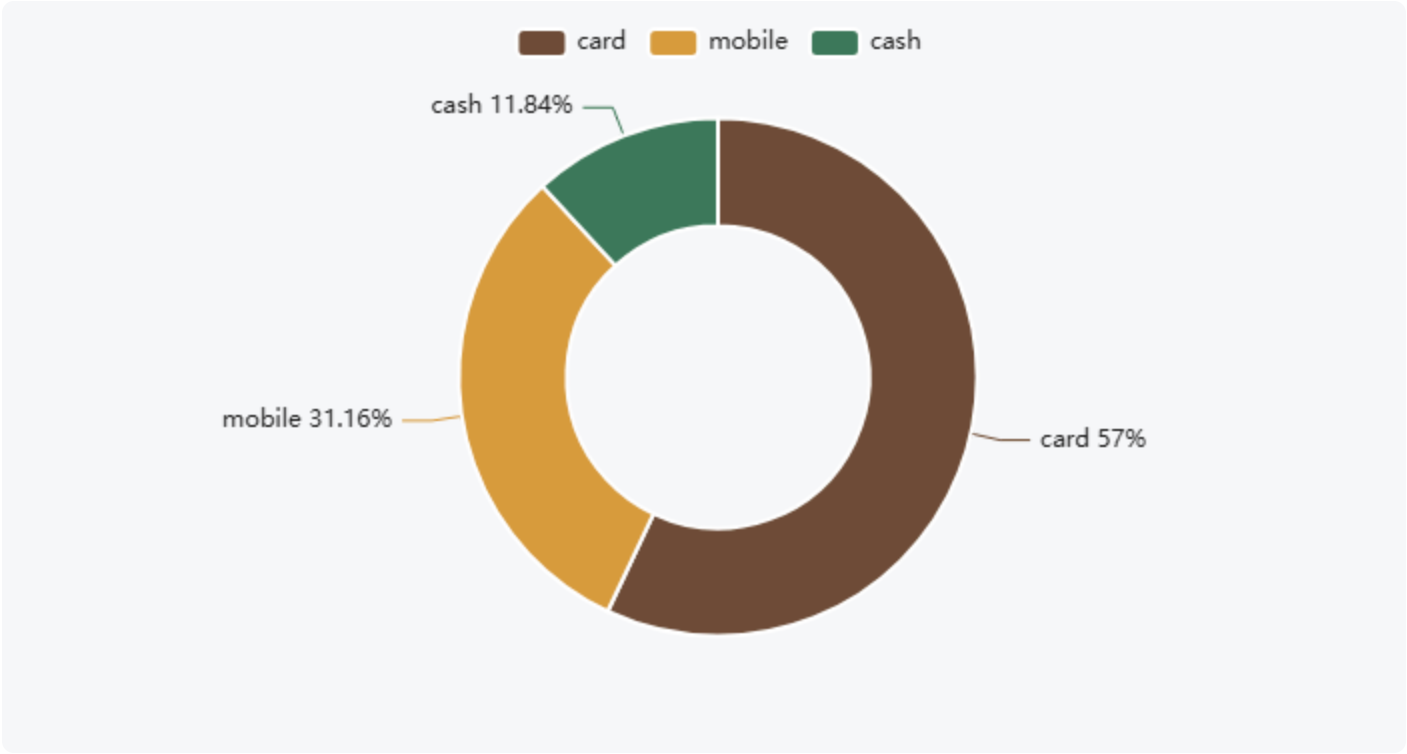

Units sold: store by product

Darker squares are higher totals.

▶ How this was made

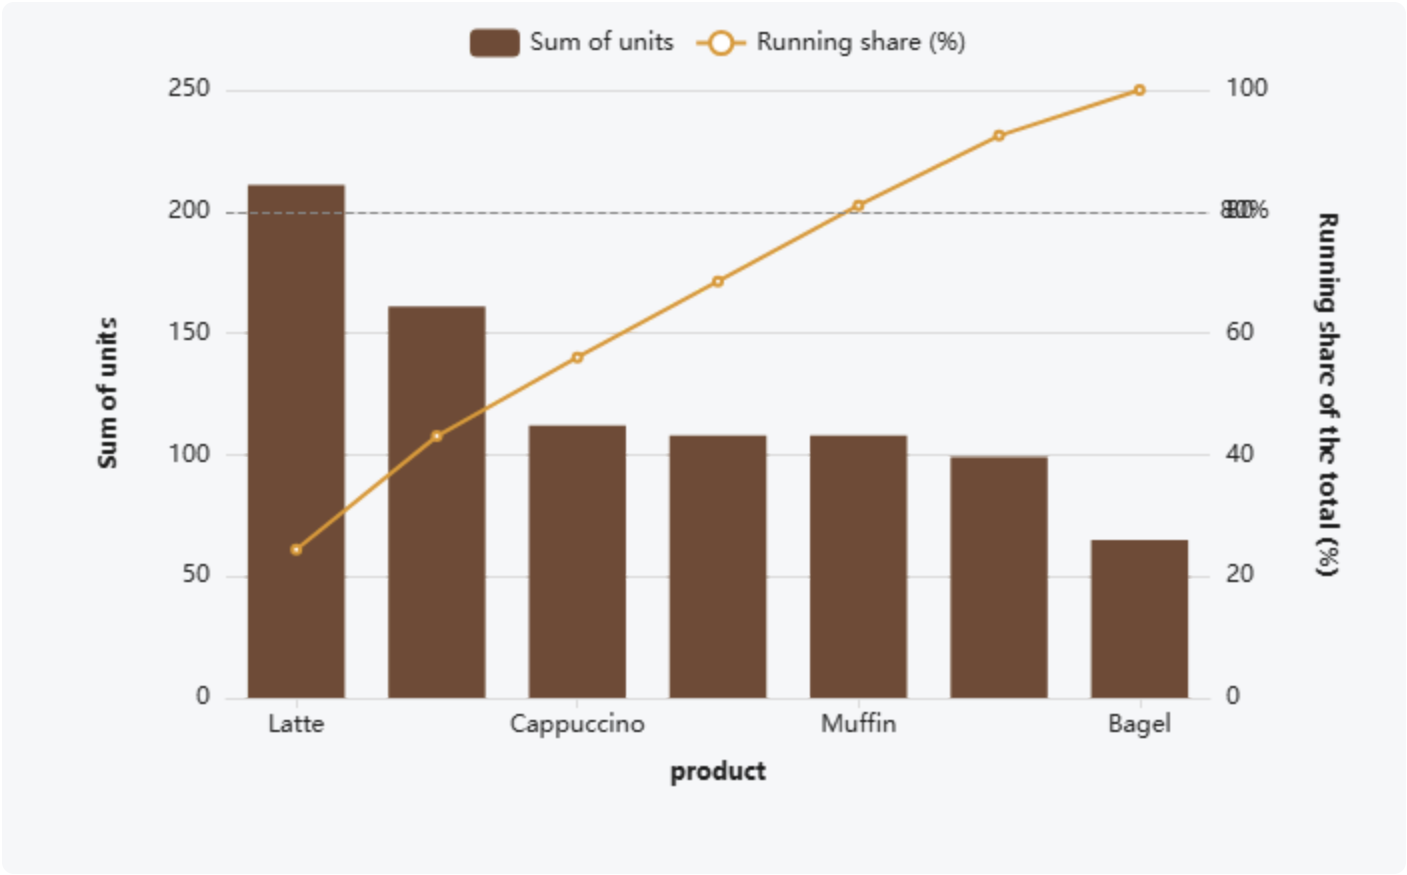

How orders were paid for

▶ How this was made

Which products account for the units

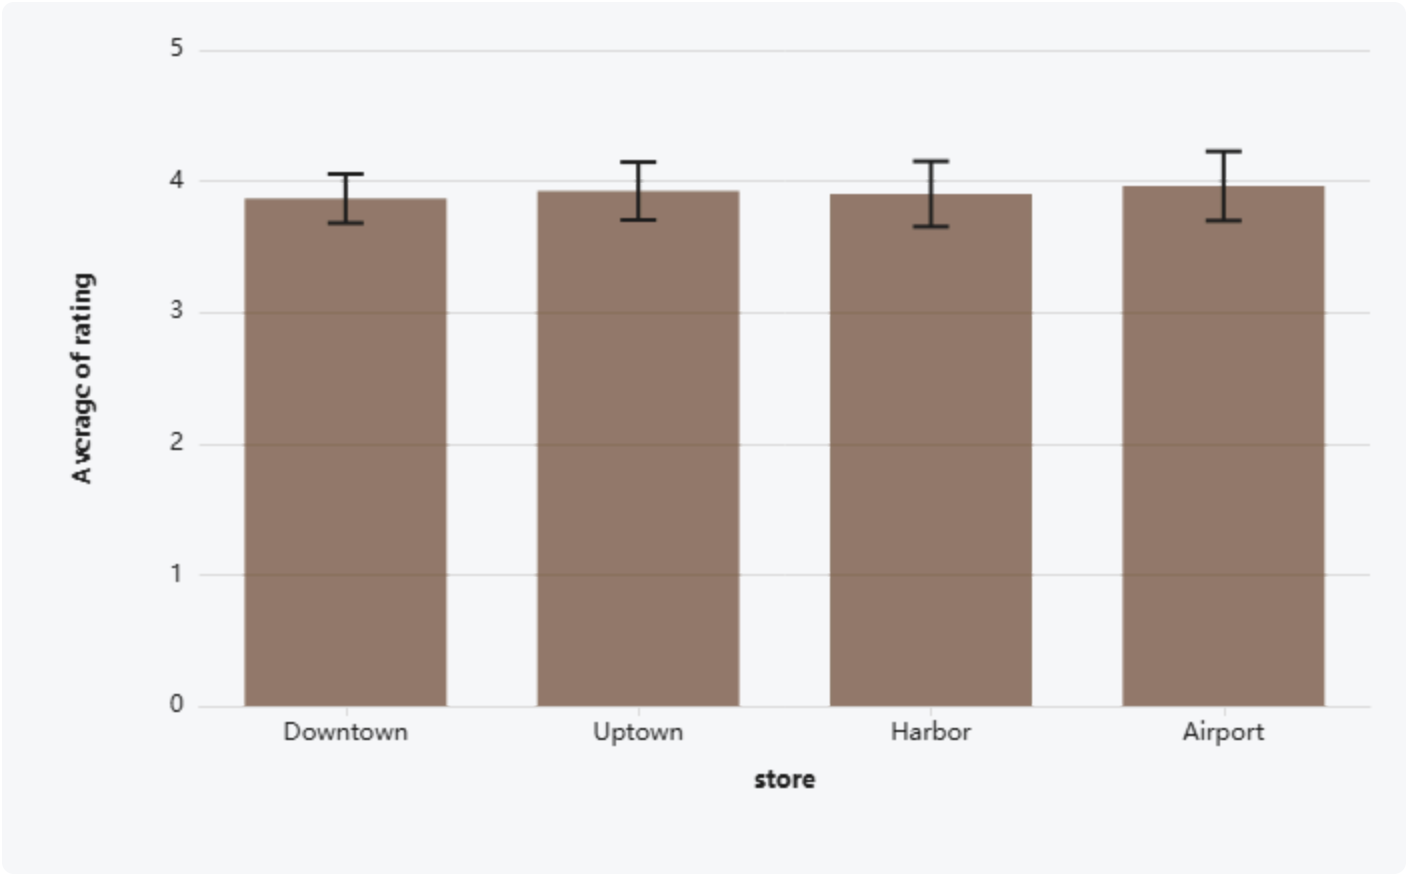

Bars are totals, largest first; the line is the running share of all units.

▶ How this was made

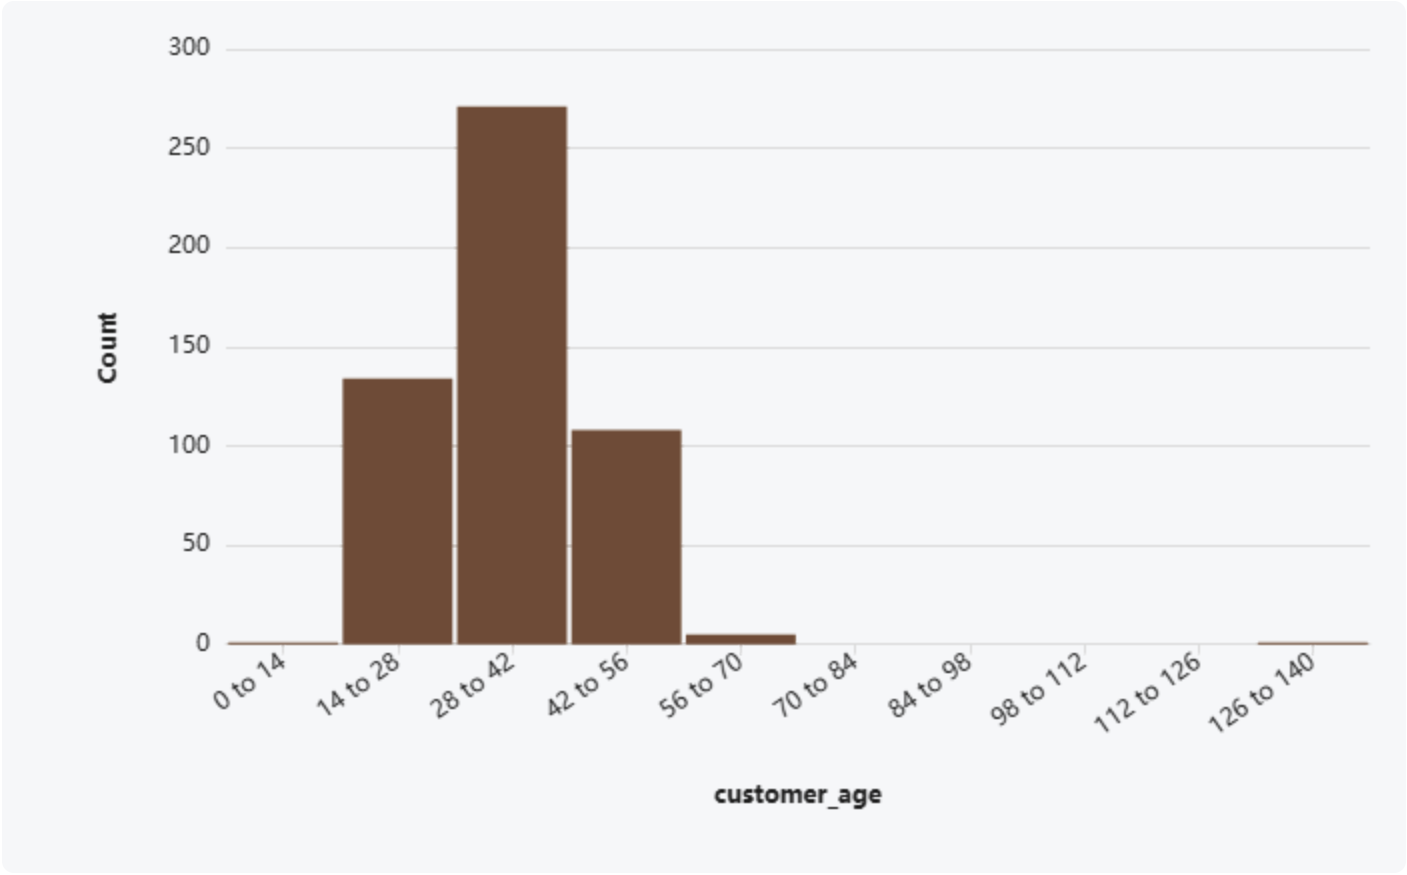

Average customer rating by store

Bars are averages; the lines show how well the ratings that exist pin each average down.

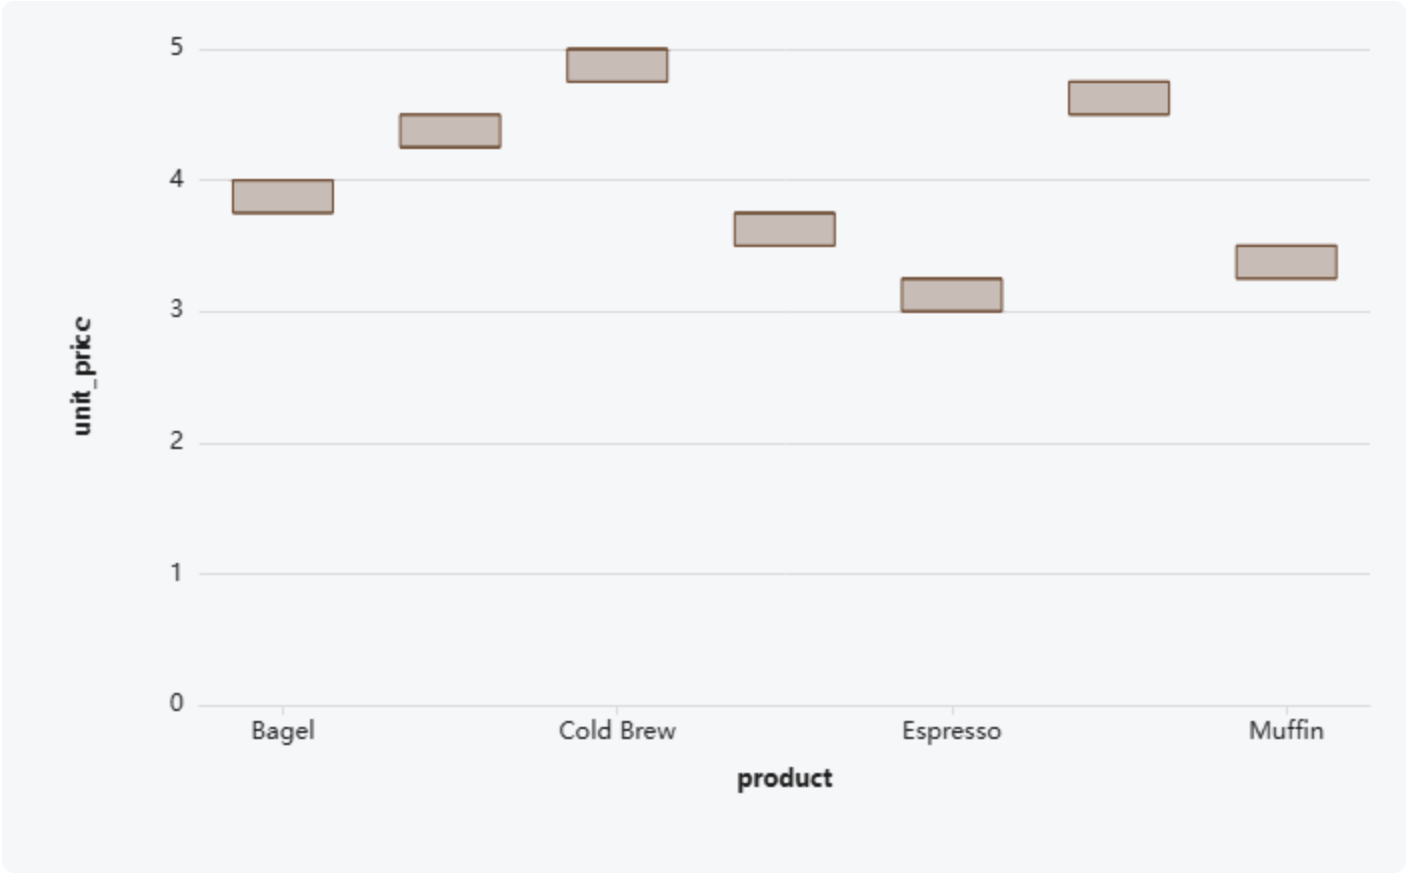

▶ How this was made

Histogram: customer_age

▶ How this was made

Box plot: unit_price by product

▶ How this was made

Work log

When	Kind	What happened
04/11/2026 11:52 pm	dataset	Added coffee-shop-sales.csv to the project
04/11/2026 11:52 pm	dataset	Opened coffee-shop-sales.csv (529 rows × 13 columns)
04/11/2026 11:52 pm	clean	Removed 2 row(s) where 'store' equals TEST (applied before the project was opened)
04/11/2026 11:52 pm	clean	Removed 1 row(s) where 'order_id' equals Total (applied before the project was opened)
04/11/2026 11:52 pm	clean	Removed 6 duplicate row(s) (compared on 'order_id'; first occurrence kept) (applied before the project was opened)
04/11/2026 11:52 pm	clean	Replaced 31 missing value(s) in 'discount_pct' with 0 (applied before the project was opened)
04/11/2026 11:52 pm	clean	Replaced 42 missing value(s) in 'customer_age' with the median (34) (applied before the project was opened)
04/11/2026 11:52 pm	clean	Changed type of 'date' from text to datetime (applied before the project was opened)
04/11/2026 11:52 pm	clean	Added column 'payment_clean': 'payment' in lower case (applied before the project was opened)
04/11/2026 11:52 pm	chart	Saved chart “Number of rows by store, split by payment_clean”
04/11/2026 11:53 pm	chart	Saved chart “Sum of units by date (per month), one line per store”
04/11/2026 11:53 pm	chart	Saved chart “Sum of units by store and product”
04/11/2026 11:53 pm	chart	Saved chart “Share of the total of units by payment_clean”
04/11/2026 11:54 pm	chart	Saved chart “Pareto of the total of units by product”
04/11/2026 11:54 pm	chart	Saved chart “Average of rating by store, with 95% intervals”
04/11/2026 11:54 pm	chart	Saved chart “Histogram: customer_age”

When	Kind	What happened
04/11/2026 11:55 pm	chart	Saved chart “Box plot: unit_price by product”

Everything above can be regenerated from the saved project: the cleaning steps are recorded and the charts keep their numbers.
